

K-MAX

ROTARY CONTROL VALVES
ANSI 150-600 CLASS

LESLIE
CONTROLS, INC.

A subsidiary of **CIRCOR** International, Inc.

The Eccentric Rotary Control Valve has **EVOLVED!**

Leslie Controls' **K-MAX** Eccentric Plug Rotary Control Valve was originally introduced to the worldwide valve market by the K&M (Kieley & Mueller) Control Valve Company. The **K-MAX** is a classic case of taking a good idea and making it even better. It's design still incorporates the cam action, low friction plug operation that provides tight shutoff over long service life in a wide variety of flow control applications.

The **K-MAX** Rotary Control Valve has improved on the performance and durability of traditional rotary control valves with the addition of these features:

■ Economical Design

The inherent versatility of the K-Max offers the advantage of using one valve style for many applications, allowing for plant standardization and minimal stocking requirements. In addition, the efficient straight-through flow design allows for a much lower cost per C, than conventional globe style control valves.

■ Eccentric Rotary Plug Action

The K-Max plug is offset to the shaft centerline. This allows the plug to break free of the seat ring immediately upon initial rotation of the shaft. Since there is no sliding contact between the plug and the seat ring throughout travel, seat ring life and shutoff integrity are greatly enhanced.

■ Self-aligning Orbital Seat

This innovative design allows orbital movement of the seat ring to provide self-alignment with the plug at assembly. Once seat ring to plug alignment is made, the seat is locked in place by the seat ring retainer. The seat ring and plug rigidly mate with every closure of the valve, maintaining excellent shutoff capability.

■ Rangeability

Rangeability of the K-Max valve is 100:1, allowing precise throttling over a wide range of flows.

■ Bi-directional Flow Capability

The normal flow direction for clean liquids, gases, and steam is flow to open (flow into the face of the plug). The recommended flow direction for erosive and slurry service is flow to close (flow into the backside of the plug). Shutoff class is maintained in either flow direction.

features

Maximum Service Life assured by these standard features:

- 1 **Dual Spline Driven Shaft**
- 2 **Large Diameter 17-4PH Stem**
- 3 **Triple Bearing Shaft Support**

- 4 **Long Packing Life and Minimized Emissions Hazard** provided by rotary valve operation.

- 5 **Fewer Possible Leak Paths** due to one piece, integral bonnet design.

- 6 **Easy Trim Size Changes** modify valve C_v by simply replacing seat ring.

- 7 **Customized Trim Options** include Stainless Steel, Stellite®, and other alloys for a variety of applications such as:

- Slurry Service
- Corrosive Chemicals
- Erosive Conditions
- Superheated Steam

- 8 **Tight Shutoff over Extended Service Life** provided by low friction, cam action offset plug mated with self-aligning orbital seat.

- 9 **Easy Maintenance and Clean-out** assured by standard shaft access plug.

Variety of End Connections

- Wafer Style (150, 300, 600 ANSI Class)
- Separable Flanged (150, 300 ANSI Class)
- Integral Flanged (150, 300, 600 ANSI Class)

technical specifications

Valve Style:

High performance eccentric rotary plug control valve.

Valve Size:

Sizes 1" through 8" (25mm-200mm) with full or reduced port trim.

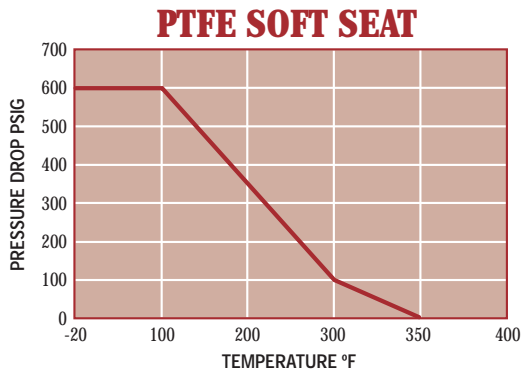

End Connection:

Flangeless ANSI class 150, 300 or 600, sizes 1" - 8".
 Separable flanged ANSI class 150 or 300, sizes 1" - 6".
 Integral flanged ANSI class 150, 300 or 600, sizes 1" - 8".

Note: Serrated raised face flanges are standard. Smooth raised face flanges, DIN and JIS flanges, available on application.

Seat Seal

- Metal to metal seat (standard) - ANSI Class IV
- Metal to metal seat (optional) - ANSI Class V
- PTFE soft seat - ANSI Class VI

The inherent flow characteristic of the K-Max valve is linear. When required, the valve travel can be modified with a positioner cam adjustment to provide equal percent flow characteristic.

FLOW CHARACTERISTIC

Body Material:

Carbon steel, ASTM A216 grade WCB
 316 stainless steel, ASTM A351 grade CF8M

Packing:

Packing Type	Temperature Range
Teflon [®] Chevron	-40°F through +450°F
Laminated Graphite	-300°F through +800°F
Teflon [®] Chevron with Viton Bearing Seals	-40°F through +450°F

Trim Material:

See K-Max valve material specifications.

Note: Other trim combinations available on application.

Alloy 6 Trim Options:

No Alloy 6

No Alloy 6 on seat ring or plug.

Partial Alloy 6

Alloy 6 on seat ring and plug seating surfaces.

Full Alloy 6

Alloy 6 on seat ring bore in addition to seat ring and plug seating surfaces.

ALLOY 6 RECOMMENDED USAGE

(ANSI CLASS 600 RATING)

technical specifications

TRIM SIZE

Full size trim	-	100% capacity
.6 reduced trim	-	60% of full capacity
.4 reduced trim	-	40% of full capacity
.2 reduced trim	-	20% of full capacity

Note:
Other trim sizes available
on application.

OPTIONS

- Fluoroelastomer bearing seal for slurry service
- Kalrez® bearing seal for slurry service
- 316 stainless steel separable flanges and retaining rings
- 316 stainless steel valve to actuator bolting
- NACE trim - conforms to NACE MR0103 & MR0175

STANDARD CLASS

Temp. °F	Working Pressure by Classes, psig		
	150	300	600
-20 to 100	285	740	1480
200	260	675	1350
300	230	655	1315
400	200	635	1270
500	170	600	1200
600	140	550	1095
650	125	535	1075
700	110	535	1065
750	95	505	1010
800	80	410	825

NOTE: Consult Factory for configurations not listed above.

Add accessories and other options as separate line items.

1. Separable flanges available in 1" - 6", ANSI 150-300 only.
2. Separable flanges available in 1" - 6", ANSI 150-300 only.
Carbon steel separable flanges only good to 800° F service.
3. Optional in 316 & CS valves.
4. Use position 9, Option 6 for shutoff classification. TFE seats 1" - 2" Full Cv only.
5. With Viton O-ring Bearing Seals.
6. Includes Yoke Kit.

applications

The **K-MAX** Rotary Control Valve is engineered to handle nearly all industrial process control requirements including:

- High and Low Pressure Steam
- Clean, Dirty and Corrosive Liquids
- Clean, Dirty and Corrosive Gas
- Erosive and Abrasive Slurries

Since LESLIE CONTROLS was founded in 1900, we have been an industry leader in quality fluid control equipment. We have developed a full line of engineered products to suit your requirements, including diaphragm control valves, control instrumentation, pressure and temperature regulators and steam water heaters.
